

# Browser Setting Adjustments for Issues Configuring the MD iMAP Template in Google Chrome

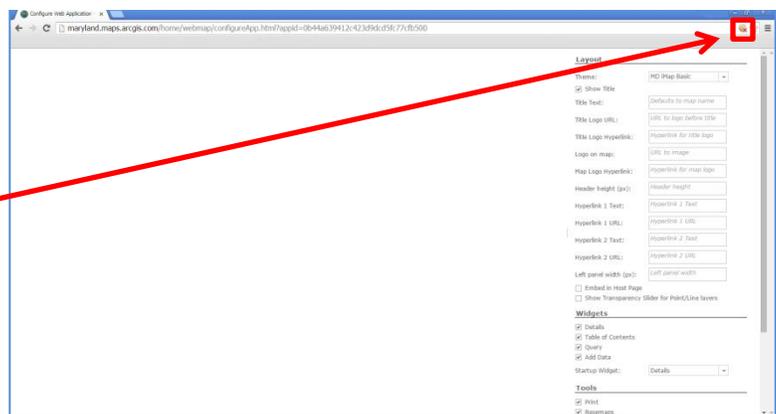

ArcGIS Online for Maryland users attempting to configure web mapping applications using the MD iMAP 2.0 Template may experience a blank web map when using the Google Chrome internet browser.

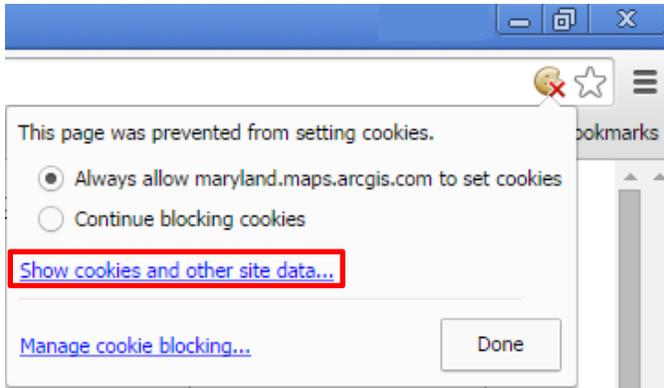

The issue is caused by settings in Google Chrome related to cookies and workstation group policies. It can be corrected by updating the following settings in Google Chrome.

*Note: This process only needs to be completed once, unless the browser cache cookies are cleared, which will require the completion of this process again.*

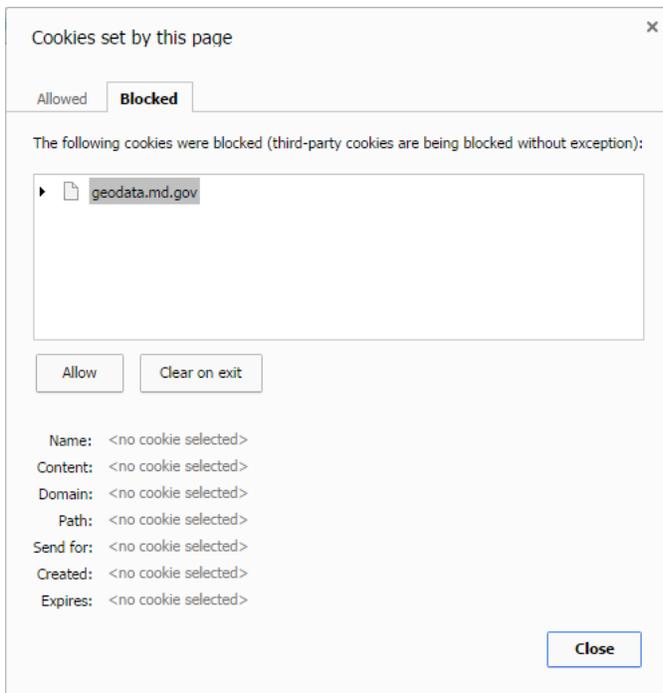

1. Click on the cookies button in Google Chrome internet browser when on the MD iMAP Template configuration screen (Upper right corner)

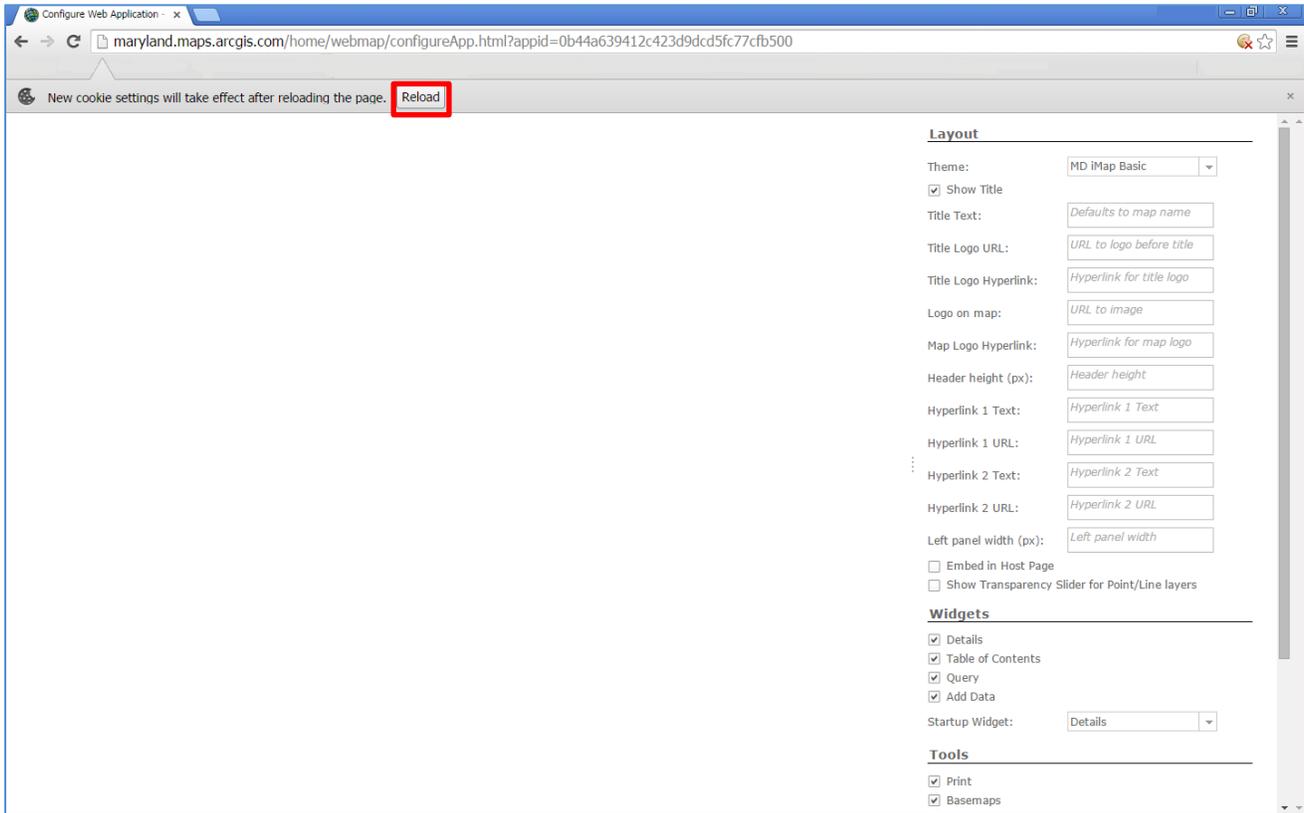

2. Click “Show cookies and other site data...”

3. Click on the Blocked tab
4. Click on geodata.md.gov, Click on Allow and Click Close

5. Click on Reload button after applying the settings

The web map will now load in the configuration screen for the MD iMAP Template.
